

1. Individual Sequence of Instructions

Ruby Johnson: ZACH → 12th Man Statue

1. Exit your class room
2. Exit the ZACH building on Spence St, turning left from the exit onto the street
3. Walk along Spence street, going straight and passing 3 buildings on your left
4. Stop when you come to the first intersection and verify that the intersecting street is Ross
5. Turn right on Ross St
6. Continue walking straight along Ross street, passing Ireland and Asbury st on the right hand side
7. Immediately after Asbury St on the right, is building 0420 (MILN) after passing this building there is a walking path crossing Ross St, turn right on this pathway
8. Continue walking straight on this path passing the BEUT building, the YMCA building, Spirit Plaza, and finally the COKE building
9. After passing the COKE building, and before passing the SSB building, there is a walking pathway, turn left here
10. After passing 3 trees, take the first right hand turn you can, taking the exact parallel turn, not the diagonal path
11. When this sidewalk ends, cut through parking lot #19 which will spit you out at the corner of lamar st and throckmorton st
12. Continue walking straight so that you are walking on Throckmorton St
13. Once you pass the RDER building on your right, at the corner of Joe Routt Bl, turn right
14. Continue walking straight on Joe Routt Bl until the road ends and becomes an unpaved sidewalk
15. Stop here and locate the first two trees on your right (past the intersection of Joe Routt Bl and Houston
16. Turn left, between those two trees and walk through them
17. Then, stop walking, you are at the front of the 12th man statue

Iris Hernandez: ZACH → Senator Matthew Gaines Statue

- 1) Exit the ZACH building onto Spence St.
- 2) Once outside, turn left
- 3) Walk along Spence St.
- 4) Continue walking straight until reaching the intersection between Spence St. and Ross St.
- 5) Upon arriving, take a right on Ross St.
- 6) Walk straight on Ross St.
- 7) Continue walking before the road separates into two, near the LECH building which should be in front of you
- 8) Using the LECH building as a reference, take a left onto Houston St.
- 9) Continue walking straight, continuing to follow Houston St.
- 10) After reaching the end of Houston St. and Lamar St. begins, take a left onto the grass
- 11) Walk forwards and take the first right
- 12) Walk forwards, and the Senator Matthew Gaines statue should be on your left

John Leach: ZACH → Aggie Ring Statue in Haynes Ring Plaza

1. Exit Zach onto Spence Street.
2. Take a left, and continue walking straight until you reach the roughneck statue
3. Take a right at the intersection
4. Continue straight until you reach the lechner residence hall in front of you, and merge left onto houston street.
5. Continue down Houston street until the road curves, at that point do not turn, continue straight onto the pavement.
6. In front of you, walk under the bridge between the rudder tower and the memorial student center where you will find yourself back onto houston street.
7. Continue straight, on your left after you pass aggie park you will reach williams alumni center.
8. Find the north side of the building.
9. You have reached the aggie ring statue.

Oliver Brumley: Zachry → Rudder Tower

1. Exit out the Northeast doors of Zachry Education Complex.
2. Walk forward, until you are on the sidewalk running along Bizzell St.
3. Turn 90 degrees right.
4. Walk forward, down the sidewalk until you reach the stop sign in front of the Wisenbaker Engineering Building.
5. Turn 90 degrees right.
6. Continue down the sidewalk, past the Engineering Quad, and stop at Spence St.
7. Turn 45 degrees left.
8. Wait until there are no cars, then Cross Spence St.
9. Continue walking straight until you are in front of the Mechanical Engineering Office Building.
10. Turn 45 degrees right.
11. Walk forward, past the weird 8-shaped statue, and keep walking straight until you reach the sidewalk along Ireland St.
12. Turn 90 degrees left.
13. Walk down the sidewalk along Ireland St until you reach an intersection with a large star emblem in the pavement. This is the intersection of Ireland and Ross. Stop at the corner in front of the crosswalk.
14. Turn 90 degrees right.
15. Wait until there are no cars, then cross Ireland St.
16. Continue straight down the sidewalk along Ross St, until you see a crosswalk and Fermier Hall directly to your left.
17. Turn 90 degrees left.
18. Cross the crosswalk.
19. Turn 90 degrees left.
20. Walk forward, until the staircase in front of Thompson Hall is directly on your right.
21. Turn 90 degrees right.

22. Walk up the staircase and continue walking forward until you reach a large satellite dish on your left.
23. Turn 90 degrees right.
24. Walk forward, until you reach the far corner of Bolton Hall. Walk 10 more steps.
25. Turn 90 degrees left.
26. Walk forward, until you reach the sidewalk in front of Nagle Hall.
27. Turn 90 degrees right.
28. Walk forward, until you reach the sidewalk in front of Houston Street.
29. Turn 90 degrees left.
30. Walk forward, until you see Rudder Tower directly on your left.
31. Stop. You have arrived.

- a. We identified Oliver's directions as being the "best" because of how specific each direction was. For example, instead of saying "turn right" he said "turn 90 degrees". In addition, the directions are very straight forward, which eliminates room for possible mistakes when following. There were also important directions that we didn't think to add, such as waiting until the street was clear of cars in order to pass.
- b. The set of sequences were produced differently given the way buildings were referenced. We also focused on different landmarks, although we all referenced buildings, only one referenced trees and only one referenced a statue.
- c. Our sequences were somewhat similar in phrasing, each direction consisting of either turning or continuing straight along your current path. When there was a turn, we mostly all specified landmarks where that would occur opposed to distance from the last turn. Additionally, we focused on large buildings and road intersections as landmark points.
- d. Considering a person who had never before stepped foot on campus, and was unfamiliar with the aggie landmarks, the best set of instructions may change from Oliver's to Iris'. This is because it requires less knowledge of specific buildings, and focuses on intersections as primary landmarks for direction. Opposingly, John's would be more well suited to someone familiar with the campus as they could more quickly locate each landmark. Also, we think Oliver's instructions would be best for someone in a wheel chair since each turn is exact and the route follows clear street intersections, whereas Ruby's instructions cut through courtyards and parking lots which would be less accessible to someone in a wheelchair.
- e. Questions
 - i. Does the person have experience with the campus?
 - ii. Does this person have any notable disabilities (walking, vision, etc)?
 - iii. What time of day are the directions needed?
 - iv. Are directions needed during the school year when the campus is very busy, or are any campus events taking place?
 - v. Is there any construction impacting the pathway?
 - vi. How would the person be receiving the directions (through images, audio, reading with a visual, just reading, etc)?
 - vii. Where in the ZACH building (what classroom) is the person starting from?

- viii. Are the directions for a human that can interpret physical descriptions and instructions like “turn 90 degrees” as nonliteral or are the instructions programming a robot?
- ix. What is the fitness level of the person receiving instructions, or how far is too far of a walking distance?
- x. Does the person get a measuring device/compass or have a strong sense of cardinal directions?
